

Removal and Restoration Completion Form
For Quick Response Action at
Lincoln County Port Authority Property
875 U.S. Highway 2
Libby, Montana

RE: EPA Property ID: AD-000686

Between August 3, 2011 and November 7, 2011, quick response removal and restoration activities took place at 875 U S Highway 2 (Lincoln County Port Authority property). This Removal and Restoration Completion Form summarizes cleanup activities that took place at the property.

1.0 Removal and Restoration Activities

1.1 Exterior

Soil was removed from the area used for parking and was restored in accordance with the Contract Documents. Confirmation soil samples were collected from this area to verify the Libby amphibole was removed to the depth required to meet current U.S. Environmental Protection Agency (EPA) removal goals. However, soils impacted with vermiculite or Libby amphibole remain at depth in the areas indicated on the attached map. This area was covered with materials in order to minimize the potential for human exposure. EPA strongly recommends that it be left alone and not disturbed. If the at-depth material is exposed or disturbed, the property owner is encouraged to refer to the guidance included in the post-cleanup completion packet. Information about Libby amphibole and vermiculite is also available at the EPA Information Center (108 E. 9th Street) and online at <http://www.epa.gov/region8/superfund/libby/inhome.html>.

I acknowledge that I have received a copy of the Removal and Restoration Statement of Work for the property and that the removal and restoration activities were performed as discussed and agreed upon prior to the cleanup.
